

## Notes for Ben Gadd's presentation on session "Writing for Different Media" at the 1999 Waterton - Glacier International Writer's Workshop

Suppose that you're writing about wolverines. Here are openings you might produce for stories in different publications:

### 1. *Natural-history guide*

**Wolverine**, *Gulo gulo* (weasel family)

Seen year-round in the Canadian Rockies. Occasional at subalpine and alpine elevations in nearly any habitat. Length 100 cm (tail 23 cm), weight 15 kg. Females about 10 percent smaller. Largest of the weasels, the wolverine is renowned for jaw-strength, attack speed and endurance. It can take prey much larger than it is.

### 2. *Children's story*

Wendy the Wolverine lived with her mother Wanda and her brother Willy under a big, cozy boulder beside the Wapta Icefield.

One day, Wendy woke up feeling very hungry.

"Mommy," she said, "I'm really, really hungry!"

Willy said, "Me, too! Me, too!"

Wanda said, "Okay, kids. Let's go kill something."

### 3. *Nature film*

Narrator: "It is spring in wolverine country." (Shot: Water dripping from melting snowbank. Close in to shot of wolverine crawling out from under a rock.)

"In the glacial moraines surrounding the Wapta Icefield, high in the Canadian Rocky Mountains, a wolverine leaves its den." (Wolverine blinks in the sun and sniffs the air.) "Soon it will satiate its hunger."

### 4. *Hollywood film*

Handheld camera, position low to the ground, moves forward through the woods. Sound of heavy breathing, grunting, gnashing of teeth. Camera moves faster, brushing past branches. Tighten shot and close in on what lies ahead: a campsite and tent. BOB and MARY look toward the camera as it approaches.

BOB: "What's that!? Oh, my God ..."

MARY: places hand over mouth and screams.

Cut to black.

### **5. National Geographic**

Grinning from ear to ear, wildlife biologist Janice Hayden-Jones watches an adult female wolverine waddle away across a mountain meadow. She has just released the animal.

“Well,” she says, looking wistful, “that’s the last one. Every wolverine in British Columbia has been tagged and radio-collared.”\*

### **6. True Hunting Action magazine**

I held steady on the wolverine as it broke cover and stepped warily into the clearing. This was the moment of a lifetime.

It turned its head toward me and sniffed. I realized that it had caught my scent. Time for the shot.

I got the round off just in time, a frontal penetration slightly left of the breastbone. Perfect. The wolverine dropped painlessly. My 180-grain handload had paid off again.

### **7. News item**

A family of four has been killed by wolverines. The attack occurred on September 19th at Takakkaw Falls Campground in Yoho National Park, near Field, British Columbia.

Dead are Mary and Robert Pleebie, of East Deerdropping, Saskatchewan, and their children Duane, 4, and Darlene, 5.

Park superintendent Lester Griswold stated that such an attack was quite unusual.

“We deeply regret this incident,” he said. “However, we are happy to report that all the animals involved had been radio-collared a few days previously.”

Park wardens are now tracking the wolverines to their lair.

### **8. Interpretive sign**

Design concept: large, colorful image of wolverine, head turned and eyes looking at the viewer.

Text in both official languages: “Wolverines are mammals. They eat a variety of foods. They are seldom seen.”
